SUMMARY

Full Stack Software Engineer with 4 years of experience building scalable web applications, backend services, and distributed systems using Java, Spring Boot, React, AWS, and Kubernetes in enterprise-scale, cloud-native production environments.

EDUCATION

M.S. Computer Engineering (Computer Systems)	Aug 2022 - May 2024
Arizona State University, Tempe, AZ	
B.Tech. Electrical and Electronics Engineering	Jun 2016 - May 2020
JNTUH College of Engineering, Hyderabad, India	

TECHNICAL SKILLS

Programming Languages	Java, Python, JavaScript, TypeScript, SQL, Linux
Web Technologies	J2EE (Servlets, JSP, JDBC, Hibernate, JPA), Spring (Boot, MVC, Data JPA, Security, AOP), NodeJS, ReactJS, REST API, GraphQL, Microservices
Data Engineering	Hadoop, Apache Spark, Kafka, Airflow
Database Management	MySQL, PostgreSQL, Oracle DB, MongoDB, Cassandra
Cloud and DevOps	AWS, GCP, Azure, Docker, Kubernetes, Terraform, Jenkins
AI/ML	RAG, Deep Agents, LangGraph, scikit-learn, PyTorch, MLOps

PROFESSIONAL EXPERIENCE

Walmart, Bentonville, AR – Software Engineer 3	May 12, 2025 – Present
- Designed and optimized high-volume Apache Spark jobs supporting the event-driven order creation workflow for International Supply Chain fulfillment, improving processing efficiency and reliability. - Improved production reliability through workflow monitoring, incident resolution, root cause analysis, and fixes for application, database, and infrastructure issues. - Led service modernization through Java/Spring Boot upgrades, platform migrations, and production validation across multiple enterprise applications. - Increased engineering efficiency by building automated tests, improving alerting, documenting best practices, and developing AI-assisted support tools.	
Arizona State University, Tempe, AZ – Software Developer	Jun 17, 2024 – Mar 2, 2025
- Designed and developed an event management social media platform for 1,000+ users, implementing QR code-based check-ins and co-hosting functionality using React and Java Spring Boot. - Deployed and managed microservices on AWS Cloud with Kubernetes, enhancing scalability and reducing downtime. Automated infrastructure with Terraform, cutting provisioning time significantly.	
Arizona State University, Tempe, AZ – Graduate Research Assistant	Jan 16, 2023 – May 6, 2024
- Created and deployed a long-term load forecasting tool on AWS ECS, leveraging MLOps practices, Spring Boot for API development, and React for interactive dashboards, resulting in a 10% increase in forecasting accuracy. - Engineered a framework in collaboration with the Israel-United States Binational Industrial Research and Development Foundation to detect and mitigate load redistribution attacks, enhancing power grid security and significantly reducing the risk of large-scale disruptions.	
Tata Consultancy Services, India – Systems Engineer	Oct 1, 2020 – Jul 4, 2022
- Developed user interfaces using React and Redux for a Software-in-Loop application, enabling over 350 users to efficiently run simulations and analyze results for automotive ADAS features, enhancing testing efficiency by 30%. Automated the build, test, and release processes using CI/CD pipelines with Jenkins and AWS CodeDeploy, leading to an increase in overall deployment efficiency.
